AI
The Elephant in The Room

**Thursday,
23 May
12.45 for 13.00**

**Speaker:
Kerrie Machin,
Partner at Mitigo**

A 30 minute lunchtime CPD session on AI and cyber security. The session will provide an overview of AI's development and its future direction in the legal sector.

The session will cover:

- A brief history of AI
- The benefits of using AI in the legal sector
- Key considerations when implementing AI into your systems and processes
- A look at a recent high profile cyber security breach within the legal profession

Mitigo's experience protecting law firms and professional services businesses enables Kerrie to highlight common vulnerabilities and explain how to implement a proportionate risk management framework.

Kerrie believes the challenges of cybersecurity, business resilience and legal & regulatory compliance needn't keep business leaders awake at night. It's just a matter of matching the right solution to the problem.

He has spent the last two decades helping businesses identify their exposure to risk, and his keen eye for detail has enabled him to deliver robust packaged solutions that provide real protection — allowing them to get on with doing what they do best.
